

The BiomolBiomed publishes an "Advanced Online" manuscript format as a free service to authors in order to expedite the dissemination of scientific findings to the research community as soon as possible after acceptance following peer review and corresponding modification (where appropriate). An "Advanced Online" manuscript is published online prior to copyediting, formatting for publication and author proofreading, but is nonetheless fully citable through its Digital Object Identifier (doi®). Nevertheless, this "Advanced Online" version is NOT the final version of the manuscript. When the final version of this paper is published within a definitive issue of the journal with copyediting, full pagination, etc., the new final version will be accessible through the same doi and this "Advanced Online" version of the paper will disappear.

Preoperative antiplatelet <sup>§</sup>	42 (51.2)	68 (48.9)	0.782	40 (52.6)	60 (50.4)	0.771

Observations are presented as “n (%)” or “ $x \pm$  standard deviation”. RC: Rutherford classification; ABI: ankle brachial index. <sup>†</sup>73/119 and 67/104 observations respectively; <sup>‡</sup>76/133 and 70/114 observations respectively; <sup>§</sup>lasted at least 6 months; \* significant statistical difference due to a p-value of less than 0.05.

**Table S6. Intra- and postoperative data based on patient in the analyses of all-cause death**

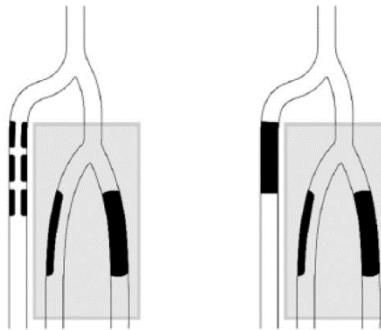

Variable	Before propensity score matching			After propensity score matching		
	DCB group (n=82)	POBA group (n=139)	p value	DCB group (n=76)	POB group (n=119)	p value
Arterial location <sup>†</sup>			0.212			0.291
Anterior tibial	26 (40.0)	45 (36.6)		24 (39.3)	35 (32.7)	
Peroneal	4 (6.2)	4 (3.2)		4 (6.6)	4 (3.7)	
Posterior tibial	21 (32.3)	36 (29.3)		19 (31.2)	35 (32.7)	
Tibiofibular trunk - peroneal	8 (12.3)	11 (8.9)		8 (13.1)	10 (9.4)	
Tibiofibular trunk - posterior tibial	6 (9.2)	27 (22.0)		6 (9.8)	23 (21.5)

-------------------------	---------	---------	-------	---------	---------	-------

Observations are presented as “n (%)" or “ $x \pm$  standard deviation”. TASC: Trans-Atlantic Inter-Society Consensus; IPA: infrapopliteal artery; SPA: suprapopliteal artery; AKI: acute kidney injury; MB: minor bleeding; PRP: puncture related problem; DCB: drug coated balloon; POB: plain old balloon.<sup>†</sup>65/123 and 61/107 observations respectively; <sup>‡</sup>infrapopliteal artery directly reaching foot without stenosis of more than 30%; <sup>§</sup>conversion to a numeric variable due to the merging of observations; <sup>¶</sup>lasted at least 6 months; significant statistical difference due to a p-value of less than 0.05.

#### TASC C lesions

Multiple stenoses in the target tibial artery and/or single occlusion with total lesion length >10 cm with occlusion or stenosis of similar or worse severity in the other tibial arteries.

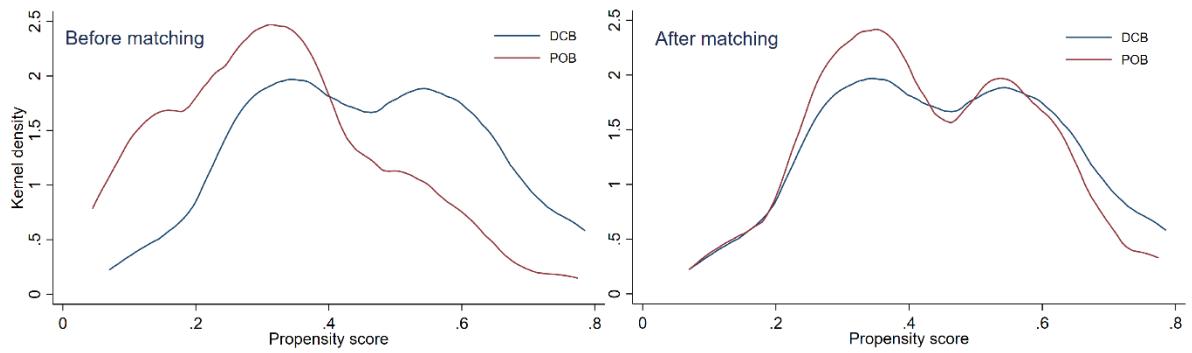

#### TASC D lesions

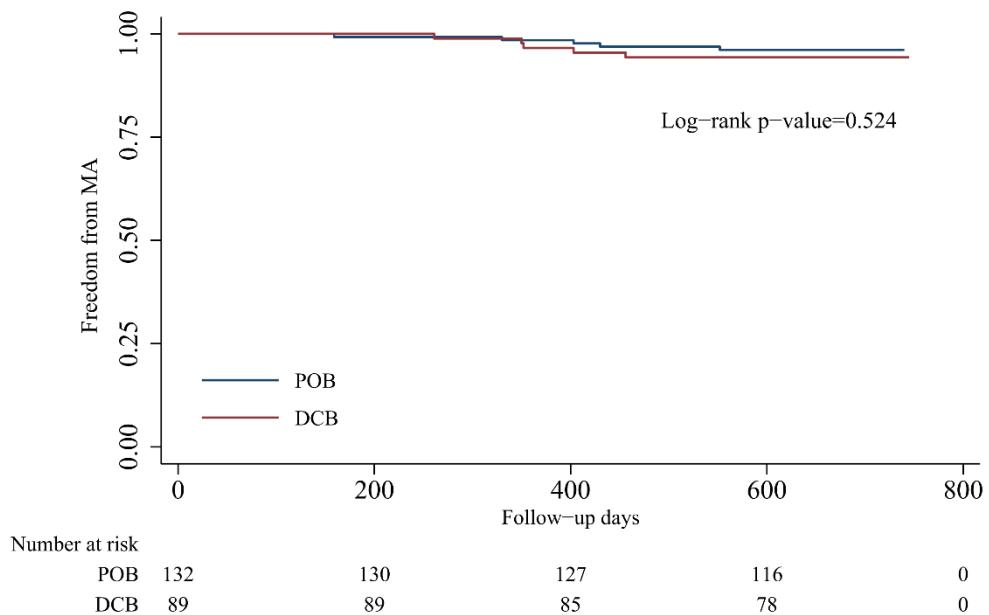

Multiple occlusions involving the target tibial artery with total lesion length >10 cm or dense lesion calcification or non-visualization of collaterals. The other tibial arteries occluded or dense calcification.

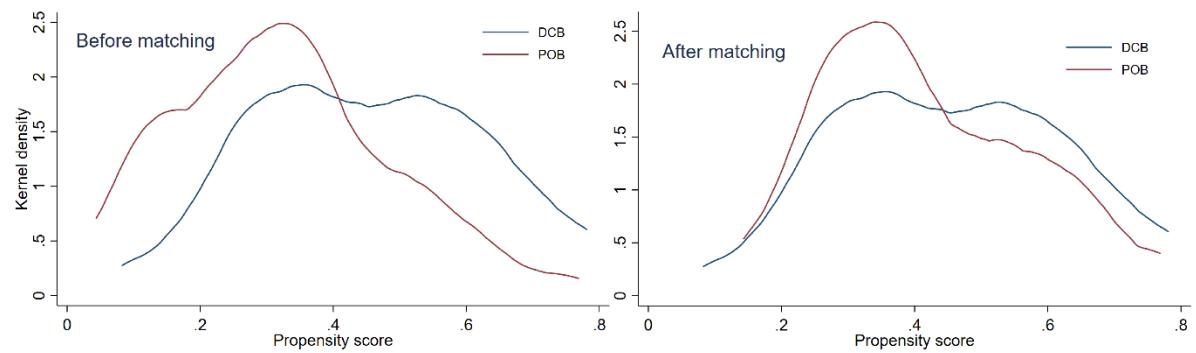

**Figure S1. TASC classification of infrapopliteal artery lesions.**

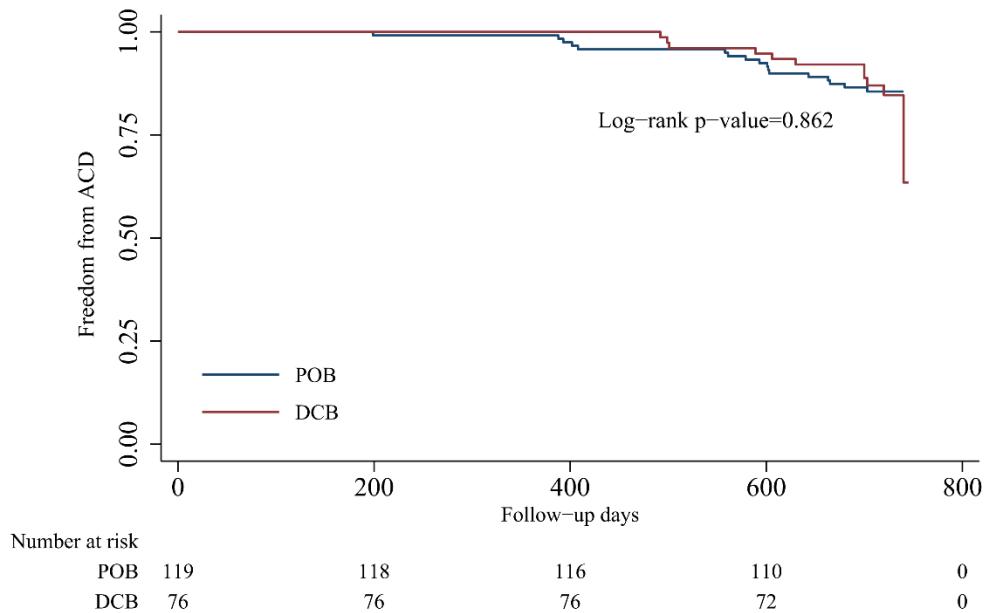

**Figure S2. Comparison of the kernel density distribution before and after propensity score matching for the data based on limb. DCB: drug coated balloon; POB: plain old balloon.**

**Figure S3. Kaplan-Meier survival of freedom from major amputation.** POB: plain old balloon; DCB: drug coated balloon.

**Figure S4. Comparison of the kernel density distribution before and after propensity score matching for the data based on patient.** DCB: drug coated balloon; POB: plain old balloon.

**Figure S5. Kaplan-Meier survival of freedom from all-cause death.** POB: plain old balloon; DCB: drug coated balloon.
